Writeup of the challenge TroyCraft

First step is to identify within the discord the conversation about the password. This can be done using discord search functions (looking up passphrase, pw or secret) or simply looking around.

You find that the password exists of a few words separated by underscores all uncapitalized.

The first one is the city of the mausoleum, which can be seen on the image. For this you can either reverse image search and it will likely pop up as it is a very distinct building, otherwise there are the license plates which indicate A, meaning Austrian and starting with G meaning they are from the city of Graz both of them. So this is Graz.

The second one is the district in which Ilus lives. You need to find on the discord the invoice png which includes blacked out address details of Ilus. You can use various tools to up the brightness a lot to see what is written underneath as it was blackened with only 99% opacity. You find that it is the Dardania District from the city Ilium. So dardania is the second word.

The third part is about 'the prominent character' in the beta testers storyline. This requires getting access to another channel for beta testers, how? This can be done by adding the beta testers role to yourself (as guest will be a role assigned to you which is higher than beta testers and includes manage roles). Looking around in the channel it can easily be found to be Alexandros.

The last part is the name of the cat of Tros which can be seen in a Minecraft image where a cat is renamed to Aeluros. You can find this conversation also by looking up cat in the discord. (The map was made by Reer123 and can be found here: https://www.planetminecraft.com/project/lacedaemon-ancient-greece/)

Combining all the four words we get:

Trojan{graz_dardania_alexandros_aeluros}
